

CHASE VALUE E-COMMERCE MIGRATION

Sprint Report — Week 2

Team: Pair A

Usman Ibrahim • Alishba Inam

Status: Completed

Live Application: chasevalue.vercel.app

Repository: [GitHub – ChaseValue Website](#)

1. Executive Summary

This sprint moved Chase Value from a static HTML/JSON prototype to a production full-stack storefront and admin platform. The team replaced hardcoded catalog data with a live PostgreSQL backend, shipped a secure Admin Portal for inventory and order management, and wired up automated deployment through Vercel.

The result is a store administrators can run day-to-day — updating stock, tracking orders, and scaling the catalog — without a developer touching code for routine changes.

60 Hours Logged	54 Products Migrated	5 Sprint Phases
---------------------------	--------------------------------	---------------------------

2. Technology Stack

Frontend	Next.js 16 (App Router) / React 19 — server-side rendering for SEO and fast time-to-first-byte.
Styling	Tailwind CSS — utility-first, responsive layout system.
Database & Auth	Supabase (PostgreSQL) with Row Level Security policies.
State	React Context API for global shopping-cart state.
Motion	Framer Motion for micro-interactions and transitions.
Deployment	Vercel Edge Network — CI/CD and global content delivery.

3. System Architecture

Requests flow from the client through Vercel's edge network into Next.js Server Components. Server Actions call Supabase directly over PostgREST, and Row Level Security enforces access control at the database layer rather than in application code.

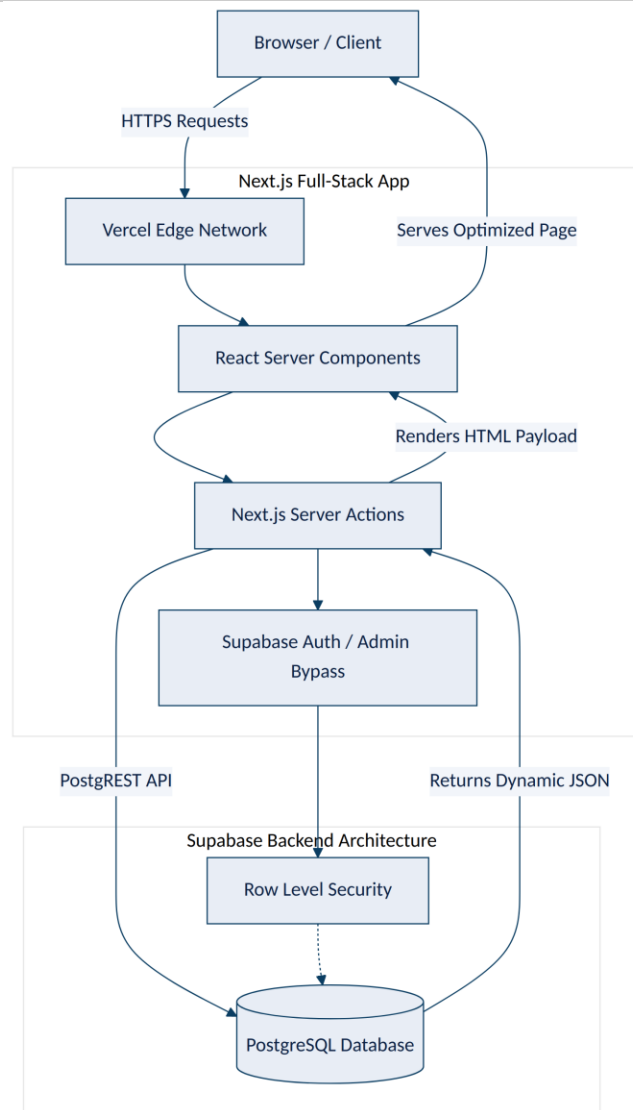

Figure 1 — Core system architecture: client, Next.js server layer, and Supabase backend.

4. Database Design

Two normalized tables anchor the schema: products carries catalog and stock data, and orders captures each transaction with a foreign key back to the purchased product.

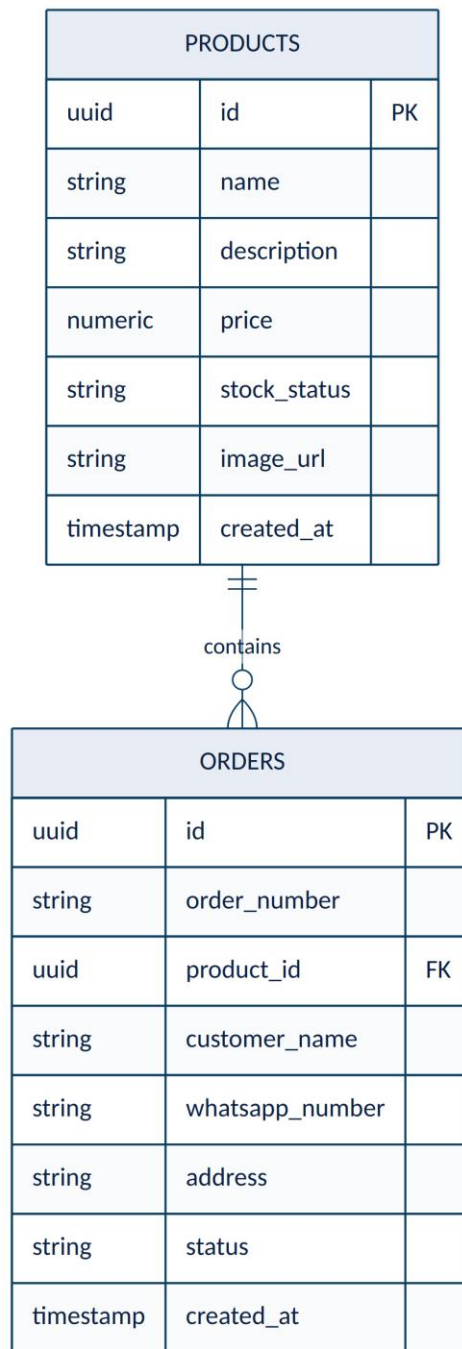

Figure 2 — Entity-relationship diagram for products and orders.

5. Sprint Work Breakdown — 60 Hours

Phase	Hours	Key Output
1. Frontend Migration & Component Architecture	10	Modular Next.js app; dynamic routing; optimized image pipeline
2. Database Schema & Backend Integration	15	Normalized schema; seeder script migrating 54 products
3. Secure Admin Portal	20	Full CRUD via Server Actions; RLS-protected /admin routes
4. Cart State & Checkout Engineering	8	Live inventory validation; transactional order writes
5. CI/CD, Optimization & QA	7	Vercel pipeline; fixed build and connection-string bugs

- **Frontend:** Rebuilt the legacy static pages as reusable components (Navbar, Footer, ProductCard) with dynamic routes for collections and individual products, plus next/image for CLS-safe, CDN-served images.
- **Backend:** Migrated the store off a local chase_products.json file onto Supabase, using a custom seeder script to batch-load the full catalog.
- **Admin:** Server Actions handle create/read/update/delete for products entirely server-side; inline stock edits sync instantly and flip the storefront's Out-of-Stock badge.
- **Checkout:** Add-to-cart now checks live stock before confirming, and checkout writes a transactional payload straight into the orders table.
- **QA & fixes:** Resolved a Turbopack JSX parsing error and a Supabase connection failure caused by a malformed environment variable path, then ran end-to-end QA on production.

6. Checkout Workflow

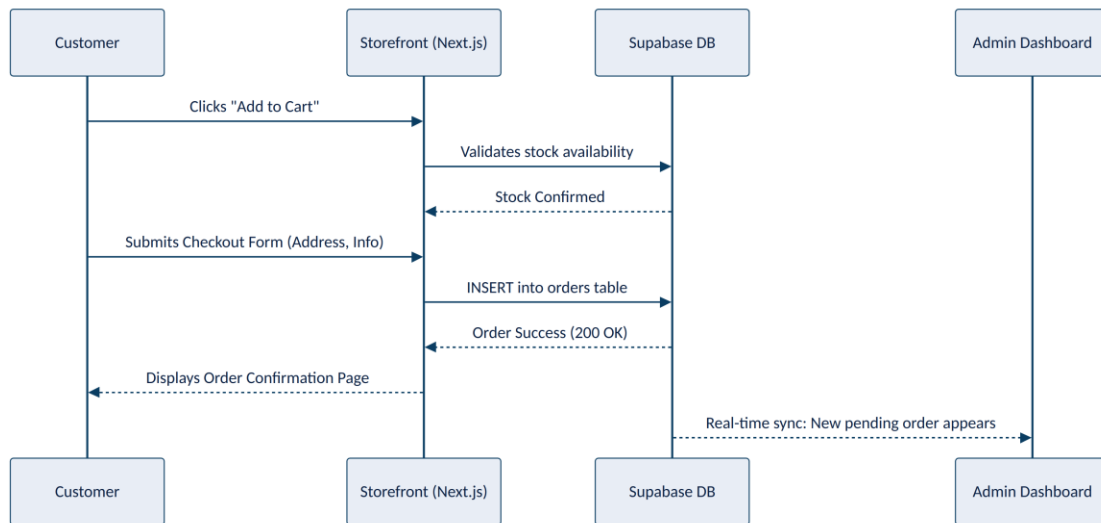

Figure 3 — Customer checkout sequence, from add-to-cart to admin-side order sync.

7. Deployment Pipeline

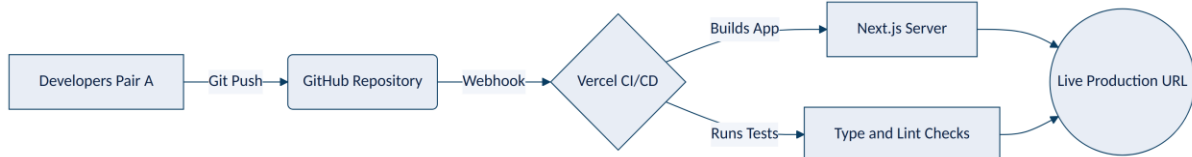

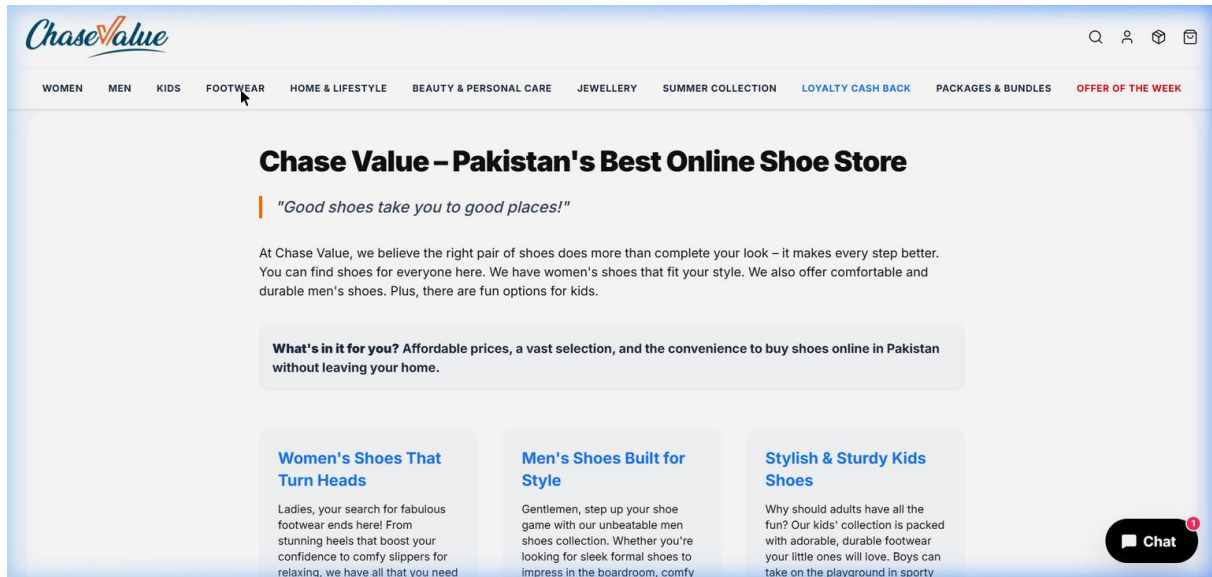

Figure 4 — Git push to Vercel build, test, and live deployment.

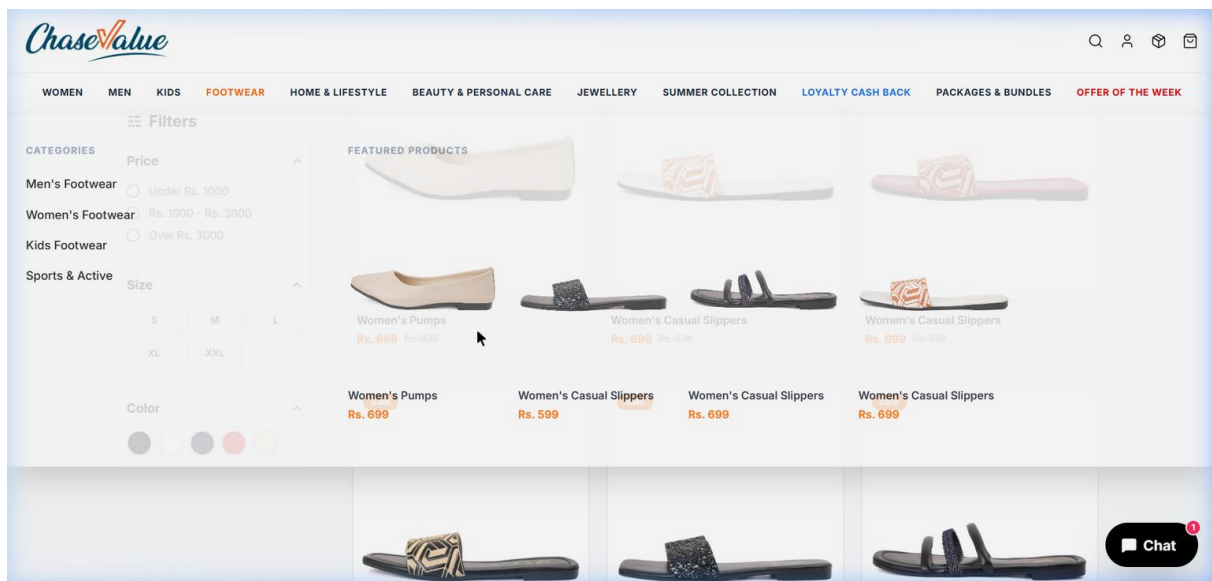

8. Visual Evidence

Screenshots below are taken from the live production build.

8.1 Storefront

Homepage — storefront rendering catalog content from Supabase.

Product listing with category filters and live pricing.

8.2 Checkout

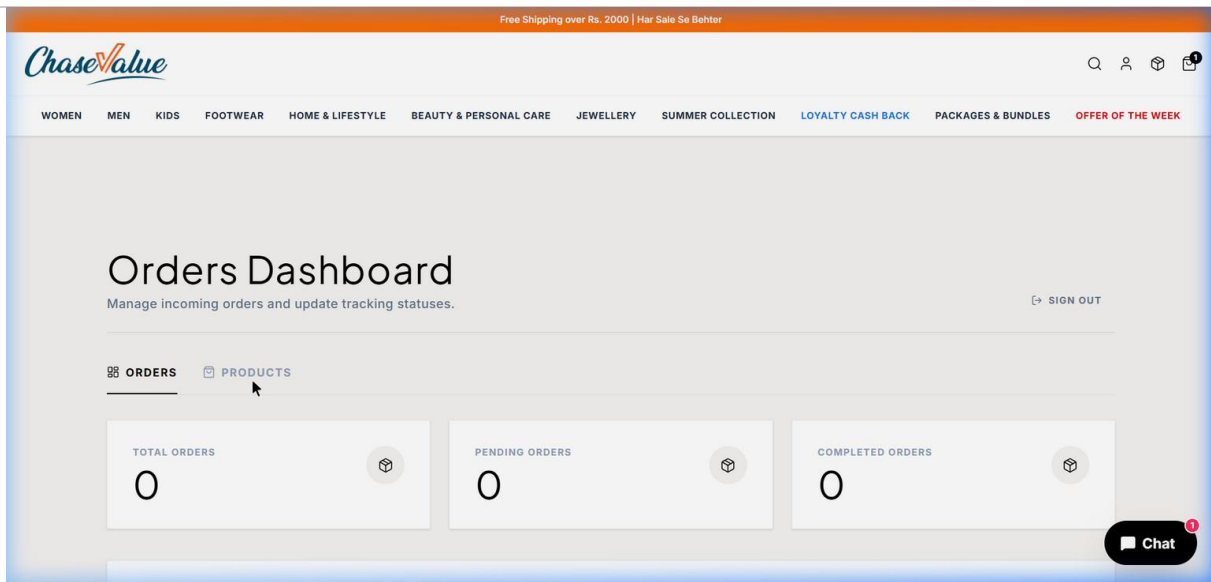

The screenshot displays the Chase Value checkout interface. At the top, the navigation bar includes the Chase Value logo, a search icon, and user account icons. Below the navigation bar, a horizontal menu lists various product categories: WOMEN, MEN, KIDS, FOOTWEAR, HOME & LIFESTYLE, BEAUTY & PERSONAL CARE, JEWELLERY, SUMMER COLLECTION, LOYALTY CASH BACK, PACKAGES & BUNDLES, and OFFER OF THE WEEK. The main content area is divided into two columns. The left column contains a form for address and payment details. It starts with a text input for 'House no, Street name, Area', followed by a 'City' dropdown menu. Below this is the 'Payment Method' section, which has two radio button options: 'Cash on Delivery (COD)' (selected) and 'Credit / Debit Card'. Each option has a corresponding button labeled 'Standard' and 'Coming Soon' respectively. At the bottom of this section is a large orange button labeled 'COMPLETE ORDER'. The right column displays the 'Order Summary' for 'Women's Pumps' (Black | Size: M) priced at Rs. 699. It also shows a 'Subtotal' of Rs. 699 and 'Shipping' of Rs. 200, leading to a 'Total' of Rs. 899. A 'Chat' button with a notification badge is located in the bottom right corner.

Checkout flow — order summary and Cash-on-Delivery payment path.

8.3 Admin Portal

The screenshot shows the Chase Value Admin Portal. The top navigation bar is orange and includes the text 'Free Shipping over Rs. 2000 | Har Sale Se Behtar'. Below this is the Chase Value logo and a search icon. A horizontal menu lists various product categories: WOMEN, MEN, KIDS, FOOTWEAR, HOME & LIFESTYLE, BEAUTY & PERSONAL CARE, JEWELLERY, SUMMER COLLECTION, LOYALTY CASH BACK, PACKAGES & BUNDLES, and OFFER OF THE WEEK. The main content area is titled 'Orders Dashboard' with the subtitle 'Manage incoming orders and update tracking statuses.' and a 'SIGN OUT' link. Below this is a tabbed interface with 'ORDERS' and 'PRODUCTS' tabs. The 'PRODUCTS' tab is active, showing a 'Manage Products' section with an '+ ADD PRODUCT' button. Below this is a large white box with a magnifying glass icon and the text 'No products found in the database.' A 'Chat' button with a notification badge is located in the bottom right corner.

Admin — product management with inline stock editing.

Admin — order tracking dashboard (total / pending / completed).
